

Container Buildings

At Absolute Containers we offer **prefabricated**, and / or **shipping container buildings** for **sale** that usually come equipped with power, water, and sometimes even central heating and air depending on your individual requirements.

When deciding to construct a container building it is important to take note that proper planning, expertise, and resources are required to construct a mobile building. Shipping container buildings allow for old shipping containers crates to be reclaimed and used to **create prefabricated structures**. Furthermore, shipping containers can be stacked vertically or lined up, side-by-side to create **residential** or **commercial buildings**.

Making use of containers to erect a building is cheaper than the cost involved with constructing a brick-and-mortar building. However, there are various factors that could lead to a significant increase in price, such as grade of container used, the total amount of container used, transportation, materials used for finishing's.

Absolute Containers offers a unique way of reducing pollution, by designing structures that reuse these shipping containers in an **innovative** way. With just a few adjustments, shipping containers can be used as part of an excellent approach to sound home building. **Available sizes** include **6m** and **12m** shipping containers, and high cube containers are also available should you be looking for extra height.

Container Buildings

Benefits of shipping container buildings:

- **Wind and watertight:** able to withstand most natural events and heavy weather conditions.
- **Modern design:** is aesthetically pleasing and quick to construct.
- **Cost-efficient:** Can be up to 60 percent cheaper than the cost involved in constructing a brick-and-mortar building.
- **Rigid structure:** has self-supporting beams, marine-grade plywood flooring in place, thereby providing a rigid structure that helps eliminate time and labour during the building process.

Buying from a reputable container company that has a good track record is **essential** when deciding to **purchase** a container otherwise you might end up spending time and money making a bad purchase and possibly compromising your container building. Generally, you would prefer for the **container conversion** to take place on container companies' site you are purchasing from and then delivered and connected to a sewage system, electricity, and water supply on site. It is also equally important to ensure building and safety regulations are adhered to when deciding to construct a container building. Absolute Containers can assist you in ensuring your floor plan is compliant with specific council regulations, let us help you contrast the ideal container building – houses, call centres, office's etc.
